Animal and Vegetable, from Fermentation and Patrefac-

"OZONE-Purified air, active state of oxygen."-Webster.

"OZONE—Purified air, active state of oxygen."—Websier.

This Preservalive is not a liquid, pickle, or any of the old and exploided processes, but it simply and purely OZONE, as produced and applied by an entirely new piccase. Ozone is the antispite orinciple of every substance, and puresses the power to preserve animal and vegetable structures from docay.

There is nothing on the face of the earth liable to spoil or decay which Ozone, the new Preservative, will not preserve for all timeta a perfectly fresh and palatable condition.

The value of Ozone as a natural preserve has been knewn to our abler chemists for years, but, until now no means of preducing it in a practical, inexpensive, and simple manner have been discovered.

Microscopic observations prove that decay is due to septic mat are or minute sensathat develop and feed upon animal and vegetable structures. Ozone, spokled by the Prenties method, selects and destroys these garms at once, and thus preserved. At our offices in the cinnatical to seem almost every article that can be thought of, preserved by this process, and every visitor la welcome to come in, tusie, smell, take away with him, and test in every way the merits of Ozone as a preservality. We will also preserve, Plack of charge, any article that is stronght or sent propaid to us, and return it to the sender, for him to keep and last.

FRESH MEARS, such as bend, mutton, well, pork, poultry, gams, fich, etc., preserved by this method, can be shipped to Europe, subjected to atmospheric changes and return to this country in a state of perfect preservation.

EARSH MEARS, such as bend, mutton, well, pork, poultry, gams, fich, etc., preserved the sumplement of the second and will sell as structly "choice." The advantage in preserving ergs is readily seen; there are seasons when they can be bought for 8 or 10 cents a daran, and by holding them, can be sold for an advance of from one handred to three hundred per cent. One man, with this method, can preserve too dozen a day.

**FREJER Second S

one can be bandred to three hundred per cent. One man, with this method, can preserve food down a day.

PRILTE may be permitted to ripen in their native climate, and can be transported to any part of the world.

The injen expressed from fruits can be held for an ladefinite period without fermantation—hence the great value of this process for producing a temperance beverage. Ulder can be held perfectly sweet for any length of time.

**Extra files* can be kept for an indefinite period in their natural condition, retaining their odor and theory treated in their original mackages, at a small expecte. All grains, flear, meal, etc., are held in their normal condition.

BUTTER, after being treated by this process, will not become rancid.

Dead human bodies, treated before decomposition sets in, can be held in a natural condition for weeks, without puncturing the skin or matilating the heavy in any way. Hence the great value of Ozone to undertakers.

There is no change in the slightest particular in the appearance of any article thus preserved, and no trace of any foreign or unnatural odo or tasts.

The process is no simple that a shild can operate it as well and successfully as a man. There is no expensive apparatus or machinary required.

A room filled with different articles, such as exper, meat, fish, etc., can be treated at one time, without additional trouble of expense. in a, without additional trouble or expense grain and their remember that we guarantee that of one will not preserve. Think of everything one on that is liable to mar, decay, or spoil, and their remember that we guarantee that been will preserve it in exactly the condition you want it for any long he of time. If you will remember this, it will save asking successions as to windther Oxine will preserve this or hat writels—it will preserve anything and everything you can think of

are is not a township in the United States in which a live mine can not make any amonn ener, from 2000 to 200,000 a year, that he pleases. We derive to get a live man interestic ach county in the United States, in whose made we can plant the Preservative, and ogh him secure the business which every county ought to produce. A FORTUNE Awaits Any Man Who Secures Control of OZONE in Any County or Township.
